

Hospitality Revenue & Performance Analytics

Atliq Grands — 5-star hotel chain across major Indian cities

What We Analyzed

Goal

Evaluate RevPAR, ADR, occupancy & realization %

Focus Areas

Pricing strategy, booking channels, customer ratings

Outcome

Strategic revenue management decisions

DATASET

Data at a Glance

92

Days Analyzed
May – July

5

Tables
Star Schema

4

Cities
Delhi, Mumbai, Hyderabad, Bangalore

7

Booking Channels
Direct + OTAs

Star Schema Architecture

Two fact tables at the center linked to three dimension tables via **property_id**, **room_category**, and **check_in_date**.

Transformation Steps

Weekend reclassified: **Friday & Saturday** = Weekend; Sunday–Thursday = Weekday.

DAX Measures & Key Metrics

RevPAR
Revenue Per Available Room

ADR
Average Daily Rate

Occupancy %
Bookings vs. Capacity

Realization %
Utilized vs. Booked Room Nights

WoW Trends
Week-over-Week % change with conditional formatting

BUSINESS PROBLEMS

Flat Pricing = Revenue Loss

Flat ADR

No dynamic pricing despite occupancy fluctuations & peak seasons

Weekend Gap

Leisure properties miss revenue — no weekend premium pricing

Low Ratings & Channel Leakage

Bottom Performers

Pareto (80/20) — e.g.,
AtliQ Grands Bangalore

Rating Impact

Low ratings (e.g. 2.3/5)
→ low occupancy + high
cancellations

Channel Leakage

Direct bookings underperform vs. high-commission
OTAs

RECOMMENDATIONS

Strategic Actions

Dynamic & Weekend Pricing

Demand-based algorithms + weekend premiums for leisure properties

Fix Low-Rating Properties

Deep-dive reviews, sync OTA listings for sub-3.0 properties

Boost Direct Bookings

Targeted promos (coupons, breakfast, loyalty points) — protect OTA rankings
